REGISTERED AT THE G.P.O. SYDNEY FOR TRANSMISSION BY POST AS A PERIODICAL

OFFICE BEARERS

President

Mr. F.J. Phillips, VK2ZQ

Secretary

Mr. W.E. Moser, JP, F.R.A.S.

Committee

Mr. D. Buching, Mrs P. Buching,
Mr. M. Guider, Mr. M. Smyth, B. Build.
Mr. P. Relf, Mr. B. McDonald,
Mr. W.C. Chalker, B.Sc.(Hons),
Mr. T.V. Homan, Mr. H. O'Brien,
Mr. J. Blattman

Advisers

Dr. D. Herbison-Evans, F.R.A.S.
Mr. T.W. Dutton, M.S.Mech.E, M.I.D.E.

EDITORIAL

To remain an economic proposition, we must have more members. It is not possible to cover the costs of investigating UFO reports, as well as publishing this newsletter with the present number of financial members.

A minimum of approximately 250 members is required in order to cover our expenses. At present the membership of UFOIC is less than half that amount, and UFOIC is being kept on its feet by loans from various members of the committee.

All members should make a point of trying to obtain more members for UFOIC.

GENERAL

UFO activity in N.S.W. seems to be fairly quiet at present, the only recent reports being descriptions of "meandering nocturnal lights". Elsewhere, however, there is some activity of note.

From recent correspondence, it appears that Tasmania and South Australia have had some low level sightings. In this issue we have details of two reports, one from Western Australia and the other from Queensland.

We also have had another report from Maitland, which appears to have a fairly continuous stream of sightings of unusual lights, similar to satellites, but changing course and stopping occasionally.

We have also been informed that Tully, Queensland, has been visited again by

From recent correspondence, it appears that Tasmania and South Australia have had some low level sightings. In this issue we have details of two reports, one from Western Australia and the other from Queensland.

We also have had another report from Maitland, which appears to have a fairly continuous stream of sightings of unusual lights, similar to satellites, but changing course and stopping occasionally.

We have also been informed that Tully, Queensland, has been visited again by UFOs in January to February 1975, with more circles being found. We hope to have more details of this activity and possible landing marks for the next newsletter.

A FURTHER SIGHTING NEAR MAITLAND, N.S.W.

At approximately 0120 hours on 17th October 1974, Mr. C.K. (see Newsletter No. 42) was awakened by his six dogs barking furiously at something outside his house. One of the dogs, which was indoors, ran in and out of the bedroom, growling and barking.

Alarmed by this unusual behaviour, Mr. K. decided to investigate. The time was then 0140 hours.

When he got outside, all the dogs stopped barking and Mr. K. observed a circular, yellowish-white light almost directly overhead. The light was stationary at an altitude of about 500' with an apparent diameter of $\frac{1}{2}$ the full moon.

After a few seconds, the light moved off slowly in a Northerly direction towards a hill about a half kilometre distant. When the light approached the top of the hill, it stopped and two bright beams of light appeared from the bottom of the first light and shone onto the ground directly below (see sketch) These beams were bright white and appeared to illuminate the ground as brightly as sunlight.

When the object became stationary, Mr. K. went indoors to phone a friend to try and get someone else to see the object. The friend, however, did not want to get out of bed at that early hour, so Mr. K. returned outside.

When he again looked at the light, it had risen above its last position and was now partly obscured by the thick cloud cover that prevailed that night. The circular light and the two beams were still visible and after a few minutes of observation, during which nothing happened, Mr. K. returned to bed. The time was then approximately 0150 hours.

The weather conditions that night were poor, with a thick overcast preventing the Moon or stars being seen.

The witness is familiar with most types of aircraft lights and was definite in stating that the beams of light were different from those used by aircraft.

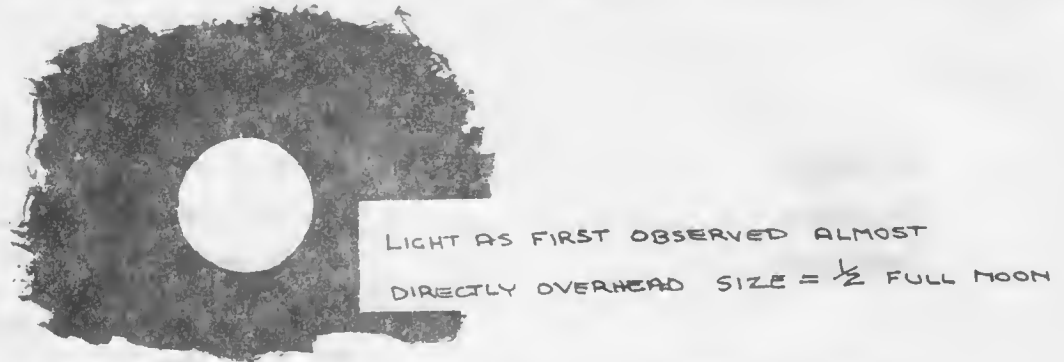

UFO WITH LIGHT BEAMS: NOTE BEAMS "CROSS EYED"

No. 42) was awakened by his six dogs barking furiously at something outside his house. One of the dogs, which was indoors, ran in and out of the bedroom, growling and barking.

Alarmed by this unusual behaviour, Mr. K. decided to investigate. The time was then 0140 hours.

When he got outside, all the dogs stopped barking and Mr. K. observed a circular, yellowish-white light almost directly overhead. The light was stationary at an altitude of about 500' with an apparent diameter of $\frac{1}{2}$ the full moon.

After a few seconds, the light moved off slowly in a Northerly direction towards a hill about a half kilometre distant. When the light approached the top of the hill, it stopped and two bright beams of light appeared from the bottom of the first light and shone onto the ground directly below (see sketch) These beams were bright white and appeared to illuminate the ground as brightly as sunlight.

When the object became stationary, Mr. K. went indoors to phone a friend to try and get someone else to see the object. The friend, however, did not want to get out of bed at that early hour, so Mr. K. returned outside.

When he again looked at the light, it had risen above its last position and was now partly obscured by the thick cloud cover that prevailed that night. The weather conditions that night were poor, with a thick overcast preventing the Moon or stars being seen.

The witness is familiar with most types of aircraft lights and was definite in stating that the beams of light were different from those used by aircraft.

U.F.O. WITH LIGHT BEAMS: NOTE BEAMS "CROSS EYED"

The absence of any sound would eliminate aircraft as a possible explanation for this report.

Some time after this sighting, after a period of heavy rain, Mr. K. noticed two circular marks on his property - below where the light was first seen. On examination, these circles appear to be the result of a fungal growth (see diagram over page)

NOTES

- 1 Observer
- 2 Circle No 1
D1 = 8.7m
D2 = 9.6m
D3 = 9.8m
3. Circle No 2.
D1 = 8.8m
D2 = 9.0m
D3 = 9.5m.
4. Distance Fence to Circle = 12.9m
5. Distance Circle to Circle = 1.6m
6. Distance Circle to tree = 15.9m
7. Distance circle to fence = 19.4m

MEASUREMENTS OF "Girdles"

FOUND AT MAITLAND - CAUSE: FUNGUS

OTHER RECENT REPORTS

Late April 1974

Captain and 3 crew members of a Boeing 707 approaching Perth, observed a bright light approaching their aircraft from the direction of Perth. The light passed to the right of the aircraft on a parallel course, with an estimated closing speed of 1200 mph (aircraft speed 250 km/per hour). The object appeared to be climbing, and passed the aircraft at an estimated height of 2000 ft (aircraft at 5000 ft). The object appeared as a circular white-yellowish light, trailing a blue-red cone shaped tail. The object was also observed by ground staff at Perth airport. This sighting occurred prior to dawn in clear weather with the lights of Perth 20-30 miles away. (Note: Precise details supplied, but withheld at witnesses' request)

17.8.74

Captain and 2 crew members of a vessel entering Port Curtis, Gladstone, Qld. observed a light approx. 16 feet above the sea, which at first was motionless and was mistaken for one of the bouys used for navigation through the harbour entrance. The vessel passed the light at a distance of 40-45 yards. The light then moved off in a southerly direction and disappeared. The light was estimated to be 3-4 feet wide but was not detected on ship's radar, although the marker bouys were monitored. After completing the second leg of the manoeuvres and commencing the final run into port, the crew noticed a further five similar lights scattered over an area between the vessel and the town of Gladstone. Two of the lights flew rapidly away to the south, while the other 3 came directly towards the ship, taking up positions either side and directly astern of the vessel. The lights remained in this position for 4-5 minutes, again nothing appearing on ship's radar. The objects then departed disappearing in a southerly direction. No sound was detected throughout the sighting.

The objects were oval in shape, pale yellow in colour, with a tinge of green along the bottom. The light appeared to pulsate and appeared to be divided into sections, though the colour was uniform throughout.

3. Circle No. 2.
D1 = 8.8m
D2 = 9.0m
D3 = 9.5m.
4. Distance Fence to Circle = 12.9m
5. Distance Circle to Circle = 1.6m
6. Distance Circle to tree = 15.9m
7. Distance circle to fence = 19.4m

Captain and crew at Gladstone, Qld.

FURTHER INFORMATION ON GREY POWDER CASES

We have received a report from one of our scientific advisers, Dr. G. Stevens, on some material collected from a possible UFO landing site at Camden, N.S.W., which was stated in our last newsletter, No. 42 to have been identified as a type of fungus.

Dr. Steven's report, which is too detailed to be included in full here, concludes that the material is definitely not a slime-mould and as yet has not been positively identified. We thank Dr. Stevens for his excellent report.

Further details of the sighting are as follows:

Late in 1972 (a Tuesday, but date not certain) a 3 year old child living on the outskirts of Camden, N.S.W. saw a lighted 'boat' above her house at about 3.00 a.m. in the morning. Next morning the father noticed a dark patch of grass on the lawn in front of their house. The dark patch was described as 'in a circular area of about 6-8 feet in diameter; It was dark grey to black in colour and was in smooth circles covering the area and mainly around the perimeter of the area'.

The child's report was "a big boat had been on the roof. It had a big light and went fast". The father adds that 'her bedroom window is on the south side of our home and she could have seen something passing over the roof from her room and travel in a southerly direction. A point of interest is that the dark patch on the front lawn is on the opposite side of the house to our daughter's bedroom and is in a line from the patch towards the south crossing over her room'.

The father is a Registered Psychiatric Nurse and it is his professional opinion (taking in many more details than those outlined above) that the child did not dream the event).

Analysis of the Material Found:

The samples were checked for the presence of Beta, Gamma, Alpha radiation without result. Microscopic examination revealed that the material was deposited on the leaf in isolated lumps or spots. It has a complex internal structure with a flaky outer shell. It appears to have a crystalline structure and is insoluble in water, ethyl alcohol, acetone, chlorinated hydrocarbons and simple ester solvents. The flakes partially dissolve in hydrochloric acid yielding an insoluble mass of fine fibres, that look like tangled fishing line under the microscope.

The report concludes that the unknown fibrous material of very fine nature (1-2 microns), is not fungal or biological at all, and whilst the possibility that the acid soluble crystalline material is some fertiliser material (phosphate and sulphate) still remains, it appears to derive its particular fine 'flake' or 'roseate' form from being superimposed upon a reinforcing mat of unknown fibrous material, of a very fine nature. In view of the frequent association of an unknown fine fibrous material (often called 'angel hair') with many UFO phenomena, especially the type IIB events, further investigation of this substance is warranted.

AUSTRALIAN CATALOGUE OF CLOSE ENCOUNTER UFO SIGHTINGS

Mr. Bill Chalker and Mr. K. Basterfield are compiling a catalogue of Australian close encounters. To date they have catalogued over 300 reports and would be grateful to receive details of any sightings of this type that members may have.

GENERAL

The President and Committee would like to welcome a new committee member, Mr. W.C. Chalker, B.Sc. (Hons). Mr. Chalker is now resident in Sydney and UFOIC are delighted to welcome such a well-known researcher into their ranks.

Next meeting will be held at the Small Hall, Science House, Gloucester Street, Sydney on June 20th. The meeting will commence at 7.30 p.m. Programme is yet to be arranged.
